

Yusen Logistics Healthcare Control Tower located in Milton Keynes, UK, is the jewel in the crown of our European as well as global GDP network.

Providing end-to-end visibility across the total supply chain, from origin cargo management to last-mile deliveries. It is more than just an operation planning centre, it enables single Yusen teams to understand, prioritize and resolve critical issues in real time. It delivers supply chain improvements thanks to greater visibility and better connections. It also supports our customers in understanding what they need, when and where they need it and making it happen, whilst also optimizing supply operations and achieving cost-saving goals.

Yusen Logistics Healthcare Control Tower enables collaboration across all Yusen business units and operations: road shipments, warehousing, air freight, ocean freight, final mile deliveries and supply chain solutions. Yusen Logistics Healthcare Control Tower offers:

- Single Point of Contact
- Data management, planning, and visibility
- Quality & Compliance
- Carrier Management
- Security
- Continuous Improvement & Best Practices
- Account Management & Financial Control
- A fully GDP compliant end-to-end Supply Chain including Temperature Monitoring Capability
- WDA licensed and ISO (9001, 18001, 14001, 28000) and TAPA certified operations

If you have any enquiries relating to the Healthcare Control Tower, please contact Stephan Van Laer, Head of Healthcare IV Europe: stephan.van.laer@eu.yusen-logistics.com.

Yusen Logistics has been providing healthcare solutions for over 20 years. Our strategy is to invest in developing innovative and quality-driven solutions that offer a global network of GDP-compliant locations and fully aligned systems, processes, and capabilities.

Yusen Logistics continues to invest heavily into quality, IT, systems, and its people to ensure our customers are provided with the best possible range of services available.

Value added services, such as consultancy, continuous improvement, solution design, and procurement are also included in the Healthcare service offering.

For example, our network is aligned through a single quality management system (eQMS) and we can offer full route risk assessments (RRAs) on all lanes and verticals utilizing the same system (Validaide). We can also offer real-time tracking on modes of transport to proactively ensure the reliability of delivery and temperature control. Moreover, we are investing in an automated system to support the end-to-end order management process of customers' supply chains.

If you have any enquiries about our services, please contact haruhiro.hoshino@jp.yusen-logistics.com or marloes.seesing@eu.yusen-logistics.com.
